- The Ages & Stages Questionnaire (**ASQ**) screens and assesses the developmental performance of children in the areas of communication, gross motor skills, fine motor skills, problem solving, and personal-social skills. It is used to identify children that would benefit from in-depth evaluation for developmental delays.
- The **M-CHAT** is a scientifically validated tool for screening children between 16 and 30 months of age that assesses risk for autism spectrum disorder (ASD).
- A Visual Evoked Potential (**VEP**) screening is conducted annually on our patients beginning at age six months through 8 years. The purpose of this test is the early detection of any abnormalities in your child's vision. We will provide you with further details regarding this non-invasive procedure when you arrive for your physical exam. You may also visit www.Diopsys.com to learn more.
- **Tdap-(Tetanus, Diphtheria, & Pertussis Vaccine)**: This vaccine is recommended for children 10 years of age and older. Due to an increase in diagnosed Pertussis (Whooping Cough) cases, this booster is now required for school attendance.
- **Menactra-(Meningococcal Vaccine)**: This vaccine is recommended for children 11 years of age and older. A booster dose is recommended before entering college.
- **Meningococcal B (Men B)**-This vaccine is recommended for patients 16 years of age and older. This vaccine is given in a 2-part series and is recommended before entering college.
- We offer the ***HPV (Human Papillomavirus vaccine)** to both our female and male patients. This vaccine is given in a 2 or 3-part series depending on what age the series is started.

Click here to visit **The Centers For Disease Control and Prevention** website at www.CDC.gov to download important vaccine information which may answer any questions you have concerning a particular vaccine.
